Appendix C: Adjusted Operating Income and Margin and Reconciliation of Return on Invested Capital (ROIC)

Return on Invested Capital (ROIC) is a non-GAAP measure calculated as adjusted net operating profit after tax (NOPAT) divided by average invested capital (short-term debt, + long-term debt + total equity) and represents how well we are allocating our capital to generate returns. The metric for the historical periods shown below was calculated using financial results for total consolidated Aon, and therefore includes discontinued operations in connection with the sale of the outsourcing business completed on May 1, 2017, which will not be included on a going forward basis.

Appendix E: Reconciliation of Free Cash Flow & Free Cash Flow Margin

Free Cash Flow Margin is a non-GAAP measure calculated as Free Cash Flow (defined as Cash Flows from Operations less Capital Expenditures) / Total Revenue and represents our conversion rate of revenue into cash. The metric for the historical periods shown below was calculated using financial results for total consolidated Aon, and therefore includes discontinued operations in connection with the sale of the outsourcing business completed on May 1, 2017, which will not be included on a going forward basis.

1. In Q4'15, we reclassified certain cash flows related to employee shares withheld for taxes. This resulted in reclassifying \$94M and \$115M for the FY'11 and FY'12, respectively, from "Accounts" payable and accrued liabilities" and "Other assets and liabilities" within Cash Flows From Operating Activities, to "Issuance of shares for employee benefit plans" within Cash Flows From Financing Activities.
